

Yu Huei, Lee (Wendy)

With **4 years of hands-on software engineering experience** across backend (Golang/AWS), mobile (React Native), and web (React) development, I bring a versatile technical background and a collaborative mindset. I am a dedicated team player who **values efficiency, effective communication, and teamwork**, with a passion for building tools and solutions that streamline workflows and help teams to work more effectively.

Job Experience

Frontend Engineer · Pinkoi, Taipei July 2025 — Present

AI Agent / React / TypeScript / Zustand / Webpack

- Initiated React Router v6 adoption by extending the existing adaptive API to migrate v3 and v5 syntax to v5-compatible, then developed an autonomous migrator agent with properly scoped boundaries that **cut migration time by 50%**.
- Led the migration from React 16 to 18, creating a staged upgrade plan that allows the agent to resolve incompatible dependencies gradually, and adding regression coverage for critical workflows.
- Built an agent skill to automate analytic tracking event implementation and verification, **saving 5 minutes per user flow test case** while improving code accuracy and maintainability.
- Built a landing page powered by a content management system, **migrating from a legacy HOC pattern to a React Context-based architecture** with TypeScript, enabling independent business team copy edits.
- Designed and implemented a reusable add-to-cart CTA component for the homepage revamp within a one-week sprint, **eliminating UI coupling and jQuery state management**.

Mobile Engineer · Citesocial, Taipei May 2024 — Jul 2025

React Native / TypeScript / Redux Toolkit / Shopify GraphQL

- Refactored the codebase by migrating from JavaScript to TypeScript and upgrading React Native from version 0.64 to 0.74, which **decreased the app's bundled size by 31% for iOS and 16% for Android**.
- Rebuilt a new data flow architecture for critical features, including social login, shopping cart, and favorite product management. Integrated Redux Toolkit into the codebase by implementing async thunk actions and listener middleware, which **reduced duplicated business logic** and increased maintainability.
- Built a **CI/CD workflow with fastlane** and GitHub Actions to deploy iOS and Android apps, cutting release cycles from hours to minutes.

Backend Engineer · Foodpanda, Taipei Jun 2022 — Dec 2023

GoLang / AWS / Docker / SQL / Postman

- Launched a feature (add pro to cart) across Southeast Asia markets, which **increased the subscription conversion rate by 23%**.
- Led the architecture design for subscription benefits data CRUD, which improved the data management user flow and **resolved technical debt** of storing duplicated data. Performed unit tests and integration tests on key user flows to uphold a minimum code coverage of 70%.
- Won **first place in a company hackathon** focused on leveraging AI to improve business profitability, building a predictive model with Google Vertex AI trained on user metadata to identify subscription cancellation reasons, enabling the marketing team to make targeted retention decisions.

Education

Monash University, Malaysia

Bachelor of Computer Science

Advanced Computer Programming

2019 — 2022 · GPA 3.8 / 4.0

Skills

Certificates

TOPIK II, level 3

March 2026

Side Projects

Replyo

Designed and implemented an auto-reply bot for Threads that allows users to customize responses per keyword for a single post, **cutting the operational time of manual replies from minutes to seconds**.

Penguin Battle

A TypeScript and boardgame.io project aimed at learning how to build and deploy a turn-based web game using a framework-driven approach with SCSS styling and Netlify hosting.

Activities

Deep Dive Club Online

Active member of a 10-person **English-speaking discussion group** with members from diverse industries. Strengthening communication, critical thinking, and the ability to engage with different perspectives.
